Memorandum

TO: Whatcom County Council

THROUGH: Mark Personius, Long Range Planning Manager

FROM: Peter Gill, Senior Planner

DATE: June 4, 2013

SUBJECT: Introduction of an ordinance to add a new chapter to the Zoning code, Lake Whatcom Watershed Overlay District; and amend the applicable references in the Whatcom County Comprehensive Plan

This chapter modifies the stormwater management rules for new development. These changes are needed in order to protect Lake Whatcom from water quality degradation that can result from an imbalance of nutrients and bacteria in the runoff that gets into the lake.

At the May 21, 2013 Natural Resource Committee meeting staff were asked to prepare an ordinance based on the code recommended by Planning Commission and updated by the Committee. This code is being introduced on June 4th.

In your packet you will find:

- **Ordinance** adopting the Lake Whatcom Watershed Overlay District and amending the Whatcom County Comprehensive Plan, Land Use chapter.
  - Exhibit B – Removal of Lake Whatcom from existing land use and stormwater regulations in WCC 20.71, WCC 20.80.635, and WCC 20.80.735
  - Exhibit C – New definitions (WCC 20.97)
  - Exhibit D – Comprehensive Plan Amendments to Policy 2DD – 2.C. This amendment is necessary to maintain consistency between the Comprehensive Plan and implementing development regulations.
Chapter 20.51

LAKE WHATCOM WATERSHED OVERLAY DISTRICT

20.51.010 Purpose.
The Lake Whatcom Watershed Overlay District is intended to manage and treat stormwater runoff and establish more stringent standards on clearing activities to reduce the phosphorus loading into Lake Whatcom in order to preserve and protect a unique and important water resource, Lake Whatcom. This district is designed to protect the long-term viability of Lake Whatcom as a drinking water source, and to comply with the requirements set forth by the Washington State Department of Ecology through the pending Lake Whatcom Total Maximum Daily Load (TMDL) by limiting the phosphorus loading into Lake Whatcom that results from land disturbing or conversion projects, and reduces phosphorus loading from existing sources to that of native vegetation (as defined by the Washington State Department of Ecology Stormwater Management Manual for Western Washington (WSDOE SWMMWW)).

20.51.030 Area and Applicability.
(1) The Lake Whatcom Watershed Overlay District is an overlay zone that covers the entire geographic area of the Lake Whatcom watershed within Whatcom County’s jurisdiction, and applies to all land disturbing or conversion projects, work or activities within the overlay zone.

(2) In the event that the provisions of this chapter conflict with the provisions of the Shoreline Management Program (WCC Title 23), Chapter 16.16 WCC, Critical Areas, the Whatcom County Development Standards, the provisions of the underlying zoning district or other applicable county policies or regulations, then the most restrictive shall apply; provided, that the minimum setback provisions established in WCC 20.51.340 shall prevail.

20.51.040 Conformance.
The provisions of this chapter overlay other permit and approval requirements of the Whatcom County Code. All use and development shall conform to all relevant requirements and standards of:

(1) Whatcom County Code, Title 20, Zoning, except as modified by this chapter;

(2) The International Building and Fire Codes;

(3) Whatcom County Critical Area Ordinance 16.16;

(4) Flood Damage Prevention, Title 17;

(5) Subdivision, Title 21, except as modified by this chapter;
EXHIBIT A—Whatcom County Code Proposed Chapter 20.51

(6) Whatcom County Development Standards - Stormwater, Chapter 2, except as modified by this chapter;
(7) Whatcom County Development Standards, Stormwater Special Districts, Chapter 2-Section 221, except as modified by this chapter;
(8) Whatcom County Code, Title 23, Shoreline Management Program;
(9) Whatcom County Code, Title 24 Health Code; and
All other applicable official controls

20.51.050 Permitted Uses.
All permitted uses in the underlying zone districts are permitted except as expressly prohibited, made conditional, or further conditioned by this chapter.

20.51.060 Accessory uses.

20.51.070 Conditional Uses.
All conditional uses in the underlying zone districts shall remain conditional uses unless expressly prohibited, made conditional, or further conditioned by this chapter. In addition, the following uses shall only be conditionally permitted:
.071 On-site storage facilities for hazardous wastes associated with outright permitted uses or approved conditional uses, other than cottage industries as defined in WCC 20.51.095, subject to the most current siting criteria under Chapter 173-303 WAC within the Rural, Rural Forestry, Commercial Forestry, Neighborhood Commercial and Resort Commercial Zone Districts only.
.072 Retail or wholesale plant nurseries or greenhouses for storage, propagation and culture of plants, provided:
(1) Greenhouses shall not be larger than 1,000 square feet.
(2) Greenhouses and cultivated ground shall not be located within 250 feet of Lake Whatcom, Lake Samish, Lake Padden or streams subject to the Shoreline Management Program; 200 feet from fish-bearing streams; or 150 feet from other streams and their tributaries that flow into Lake Whatcom, Lake Samish, and Lake Padden.
(3) A monitoring program has been established to ensure that chemical and pesticide quantities in stormwater runoff do not exceed state water quality standards. Complete control of drainage from the operation shall be in effect. Such runoff will be tested for pollutants bimonthly by a licensed water quality testing agency. All requirements will be met at the owner’s expense.

(4) No person shall apply a commercial fertilizer, either liquid or granular, that is labeled as containing more than zero percent phosphorous or other compound containing phosphorous, such as phosphate; provided, that such fertilizers may be used for establishment of new vegetation in the first growing season.

.073 Type I solid waste handling facilities, except:

(1) Moderate risk waste facilities; and

20.51.080 Prohibited Uses.

In addition to the uses prohibited in the underlying zone districts, the following uses are prohibited, except as per Chapter 20.83 WCC:

.081 Dry cleaning establishments.

.082 Gas stations, service stations, combustion engine repair garages and automotive wrecking yards.

.083 Sod farming.

.084 Aquaculture and mariculture projects.

.085 Operation of fur farms.

.086 Confinement feeding operations.

.087 Asphalt and concrete batch plants.

.088 Gravel bar scalping projects within the jurisdiction of the Shoreline Management Program.

.089 Utilization of sewage sludge on land.

.090 On-site treatment facilities for hazardous wastes.

.091 Type I solid waste handling facilities, except those specified in WCC 20.51.073.
EXHIBIT A-Whatcom County Code Proposed Chapter 20.51

.092 Type II, and Type III, and Type IV solid waste handling facilities.

.093 Golf courses.

.094 Cemeteries.

.095 Cottage industries that would require on-site hazardous waste storage facilities.

.096 Surface mining outside of designated Mineral Resource Lands (MRL) Special Districts; provided, that surface mining, rock crushing, washing and sorting subject to the Forest Practices Act (Chapter 76.09 RCW) are permitted.

.097 Major passenger intermodal terminals.

.098 Freight railroad switching yards and terminals.

.099 Agriculture, including animal husbandry, horticulture, viticulture, floriculture, and the cultivation of crops.

.100 Animal hospitals and accessory kennels and stables.

20.51.300 Open space and impervious surfaces.

.301 Open space requirements shall be as follows:

(1) For uses in the TC and NC Zones, at least 25 percent of the parcel shall be reserved as open space.

(2) For uses in the RC Zone, at least 40 percent of the parcel shall be reserved as open space.

(3) Open space areas shall be maintained in natural vegetation or landscaped per WCC 20.80.325.

(4) For properties within the jurisdiction of the Shoreline Management Program (WCC Title 23), submerged lands and/or tidelands within the boundaries of any waterfront parcel that are located waterward of the ordinary high water mark shall not be used in open space calculations.

.302 Impervious surface requirements shall be as follows:

(1) For uses in the UR, URM and RR Zone Districts, at least 80 percent of the lot or parcel shall be kept free of structures and impervious surfaces.
EXHIBIT A—Whatcom County Code Proposed Chapter 20.51

(2) For uses in the R Zone District, at least 90 percent of the lot or parcel shall be kept free of structures and impervious surfaces.

(3) Where subsection (1) or (2) of this section does not allow 2,500 square feet of total impervious surface area, 2,500 square feet shall be allowed.

(4) Two or more lots of record consolidated pursuant to the provisions of WCC 20.83.070 shall be treated as one undivided parcel for the purpose of calculating total allowable impervious surface. Where two or more lots or parcels are consolidated, are not subject to the provisions of WCC 20.83.070; and are not subject to a permanent restrictive covenant that precludes development of buildings, structures or other improvements not otherwise identified by said covenant, 4,000 square feet of impervious surface shall be allowed.

(5) Preexisting nonconforming impervious surfaces may be routinely maintained/repaired or redeveloped; provided, that if 50 percent or greater of the preexisting nonconforming impervious area is to be redeveloped, then the applicable impervious surface limitations of subsections (1), (2) and (3) of this section shall apply. However, if a legal nonconforming structure is destroyed, the nonconforming use may be reconstructed using the pre-existing footprint. Expansion of nonconforming impervious surfaces shall be prohibited.

(6) A mobile home within an existing mobile home park may be replaced with a larger mobile home (not to exceed a maximum of 1,500 square feet), provided there is not an increase in the overall number of mobile homes in the park or any increase in other impervious surfaces beyond the new mobile home footprint.

(7) For properties within the jurisdiction of the Shoreline Management Program (WCC Title 23), submerged lands and/or tidelands within the boundaries of any waterfront parcel that are located waterward of the ordinary high water mark shall not be used in impervious/pervious surface calculations.

(8) Any portion of a roof overhang or other overhanging architectural feature which projects further than three feet from the footprint of a structure shall be calculated as impervious surface.

20.51.310 Cluster subdivisions.

The purpose of cluster subdivision is to provide a method of creating building lots with spatially efficient sizes. Clustering is intended to consolidate development and associated infrastructure, reduce development costs, and increase infrastructure efficiency. Clustering is also intended to help preserve open space and the character of areas, reduce total impervious surface area, and minimize development effects on critical areas and associated

Comment [w18]: Taken from original code section WCC 20.71.

20.51.320 Cluster design standards. The creation of new building lots within the Water Resource Protection Lake Water Resource Protection Lake Whatcom Watershed Overlay District shall be subject to the following design standards:

(1) Cluster subdivisions shall be required for all land divisions resulting in lots less than five acres in size, with the exception of boundary line adjustments.

(2) A cluster subdivision shall include a permanent open space reserve area meeting the criteria established in WCC 20.51.330.

(3) The minimum cluster lot size requirements of the underlying zone district shall apply.

(4) The maximum number of building lots in a lot cluster shall be 10.

(5) Clusters containing two or more lots of less than one acre within a proposed development shall be separated by at least 80 feet.

(6) Clustered building lots may only be created through the subdivision, short subdivision or binding site plan process pursuant to WCC Title 21.

(7) Building lots shall be designed and located to be compatible with, and avoid disturbance of, critical areas, other valuable or unique natural resources, known archaeological sites, as well as physical constraints of the site.

(8) Building lots shall be arranged in a cluster/concentrated pattern.

(9) A cluster subdivision shall have no more than two common encroachments on existing county roads unless site constraints require additional road access. The arrangement of clustered building lots shall be designed to avoid development forms commonly known as linear, straight line or highway strip patterns.

(10) As applicable, interior streets shall be designed to allow future vehicular access to any portion of the reserve tract which may be divided into future building lots; provided, that the required permanent open space reserve area, pursuant to WCC 20.51.330, shall not be further subdivided. (Ord. 2009-009 Exh. A, 2009; Ord. 2005-085 § 1, 2005; Ord. 2005-048 Exh. A, 2005; Ord. 2004-007 § 1, 2004; Ord. 2003-049 § 1, 2003; Ord. 2003-032 Exh. A, 2003; Ord. 2002-075, 2002; Ord. 2002-034, 2002).

20.51.330 Open space reserve area.
(1) For purposes of this title, an “open space reserve area” shall be defined as that portion of a subdivision or short subdivision set aside in accordance with this chapter, and permanently dedicated for active or passive recreation, critical area protection, natural resource or archaeological site preservation, wildlife habitat and/or visual enjoyment, and shall be consistent with the definition of “open space” pursuant to WCC 20.97.275.

(2) The open space reserve area shall be subject to the following provisions:

(a) The minimum open space reserve area shall be determined by the minimum cluster subdivision reserve area requirements of the underlying zone district.

(b) A permanent open space reserve area shall be protected using one of the following mechanisms:

(i) Placement in a separate nonbuilding tract owned in common by all lots within the subdivision; or

(ii) Covered by a protective easement or public or private land trust dedication which protects at least the minimum required cluster reserve area specified in the underlying zone district; or

(iii) Preserved through an appropriate permanent protective mechanism that provides the same level of permanent protection as subsection (2)(b)(i) of this section as determined by the county zoning administrator or hearing examiner which applies to at least the minimum required cluster reserve area specified in the underlying zone district.

(c) The boundaries of the open space portion of the reserve area may be altered only if the county finds that in dedicating adjacent reserve areas it would further the objectives listed in WCC 20.51.310 by altering the reserve area and increasing the area of reserve proportionately on the adjacent land being subdivided so that there is no net reduction in open space reserve area.

(d) The purpose of the open space reserve area as defined in subsection (1) of this section shall be recorded on the face of the final plat or short plat.

(e) The remaining unused development density and/or impervious surface allowances remaining on the parcel containing the open space reserve area, based on the gross density of the parent parcel, may be assigned to that portion of the reserve tract not subject to the minimum area requirements of subsection (2)(b) of this section. The density shall be recorded on the face of the final plat or short plat. The development rights assigned to the reserve tract in accordance with this subsection may not be transferred if the pervious surface area associated with the reserve tract has been transferred to the other building lots within the subdivision.

(f) The requirements stated in subsections (2)(c) and (d) of this section shall be recorded as a restriction on the face of the final plat or short plat, and shall constitute...
EXHIBIT A—Whatcom County Code Proposed Chapter 20.51

an agreement between Whatcom County and the current/future owner(s) of record
that shall run with the land. Said restriction(s) may be amended by mutual agreement
between said parties after review for consistency and compliance with the official
Whatcom County Zoning Ordinance, the Whatcom County Subdivision Ordinance, and
the Whatcom County Comprehensive Plan.

For cluster subdivisions approved after December 7, 1999, that portion of the
reserve tract which is kept in pervious open space may be counted toward pervious
surface area requirements for the building lots in the subdivision on a prorated basis.

20.51.340 Building setback/buffer areas.
.341 Setbacks for all properties within the overlay district shall be as follows: Class I and
Class II roads shall have a minimum setback of 30 feet; and Class III, IV and V roads shall
have a minimum setback of 20 feet; provided, that the road right-of-way meets the
minimum standard for road rights-of-way pursuant to the Whatcom County Development
Standards.

.342 Roof overhangs or other overhanging architectural features shall not project further
than 18 inches into the side or rear yard setbacks. Such overhangs may extend three feet
into the front yard setback; however, in no case shall they extend more than one-half the
2002-075, 2002; Ord. 2002-034, 2002; Ord. 2001-062 § 1, 2001; Ord. 2001-021 § 1,

20.51.350 Development criteria.
2002; Ord. 2001-021 § 1, 2001).

20.51.360 Parking space dimensions.
A standard parking space shall have the rectangular dimensions of 10 feet in width and 20
feet in length; provided, that for any parking area of six or more spaces, 50 percent of all
spaces may have the rectangular dimensions of eight feet in width and 15 feet in length;
and further provided, that these spaces are marked for use by compact automobiles. Except
in single-family residential areas, all dimensions shall be exclusive of driveways, aisles and
other circulation areas required under WCC 20.80.560 and 20.80.570. (Ord. 2009-009 Exh.
§ 1, 2001; Ord. 99-086, 1999).

20.51.370 Parking requirements.

Comment [w24]: PC recommendation from May 10, 2012

Comment [w25]: Taken from original code section WCC 20.71

Comment [w28]: Taken from original code section WCC 20.71

|
Parking shall conform to the requirements of WCC 20.80.500 through 20.80.590 unless otherwise specified in this section. Minimum parking requirements may be reduced through any of the following methods:

(1) A shared parking agreement has been filed with the county auditor establishing a shared parking lot for land uses with noncompeting hours of operation, or for multitenant retail and commercial facilities; provided, the parking lot is not located further than 700 feet from any of the uses it is intended to serve.

(a) The minimum required parking in shared facilities shall be based on the land use with the highest parking demand.

(b) Mixed use developments with similar operating hours may be required to submit a parking demand study to determine if parking can be combined.

(2) A 20 percent reduction may be approved if an establishment is located within 1,000 feet of any regularly scheduled bus stop.

20.51.380 Alternative surfacing methods.

Alternative surfaces including, but not limited to, bark or wood mulch, washed gravel, grid/lattice systems, permeable interlocking pavers, pervious concrete, porous asphalt, and other similar approved materials are encouraged. Alternative surfacing methods may be approved for fringe or overflow parking areas; emergency parking areas, private roads, fire lanes, road shoulders, bike paths, walkways, patios, driveways, and easement service roads in residential or commercial zones unless site constraints make use of such materials detrimental to water quality. Utilization of alternative surfacing methods shall be subject to review and approval by the Whatcom County public works department, the fire marshal and/or the county ADA coordinator for compliance with other applicable regulations and development standards. Surfaces shall be considered impervious surfaces under WCC 20.71.300 unless the following conditions are met:

(1) Bark, wood mulch, and washed gravel shall be designed and installed so that all rain falling upon the alternative surface will be infiltrated directly beneath the alternative surface without generating surface runoff based on the one-year, 24-hour storm event.

EXHIBIT A—Whatcom County Code Proposed Chapter 20.51

20.51.390 Vehicular access.
Driveways and curb cuts shall be minimized along all arterial and collector roads. Each existing lot shall be allowed only one driveway or curb cut; adjacent lots are encouraged to share access points. In new developments, lots or leased sites shall be oriented toward internal driveways, parking areas, or roads with limited access to arterial or collector roads. (Ord. 2009-009 Exh. A, 2009; Ord. 2005-085 § 1, 2005; Ord. 2004-007 § 1, 2004; Ord. 2003-049 § 1, 2003; Ord. 2003-032 Exh. A, 2003; Ord. 2002-075, 2002; Ord. 2002-034, 2002; Ord. 2001-021 § 1, 2001; Ord. 99-086, 1999).

20.51.400 Roads, curbs, gutters and sidewalks.
The intent of this section is to reduce impervious surfaces and stormwater runoff. Innovative street sections, which do not compromise public safety, shall be encouraged in the watershed. Narrow streets and reduced sidewalk standards that satisfy pedestrian and vehicular circulation requirements may be implemented with the approval of the Whatcom County public works department. Unless specifically required, roads shall not be wider than the minimum applicable standard. A rural road standard may be approved by the Whatcom County public works department for urban density residential areas where the developer provides adequate off-street parking and pedestrian walkways. (Ord. 2009-009 Exh. A, 2009; Ord. 2005-085 § 1, 2005; Ord. 2004-007 § 1, 2004; Ord. 2003-049 § 1, 2003; Ord. 2003-032 Exh. A, 2003; Ord. 2002-075, 2002; Ord. 2002-034, 2002; Ord. 2001-021 § 1, 2001; Ord. 99-086, 1999).

20.51.410 Seasonal Clearing Activity Limitations
The intent of seasonal clearing activity limitations is to establish a more stringent standard for clearing activity in highly valued water resource areas, environmentally sensitive areas, or areas where natural conditions are so unstable that clearing activity in the areas can result in hazardous conditions. Implementation of best management practices, including phased clearing, tree retention and seasonal clearing limitations, is intended to limit the amount of exposed soils on site that are susceptible to erosion at any one time, thereby improving site stability during development and reducing potential for transport of dissolved pollutants and sediments off site. Preservation of existing trees on site also reduces the quantity and maintains the quality of stormwater leaving a site during and after development activities by encouraging interception, infiltration and evapotranspiration of rainfall and surface runoff.

(1) County review and approval shall be required for all clearing activities associated with a fill and grade permit, building permit or other development proposal.
EXHIBIT A-Whatcom County Code Proposed Chapter 20.51

(2) Clearing activity, as defined in WCC 20.97.054, that will result in exposed soils exceeding 500 square feet shall not be permitted from October 1st through May 31st; provided, that:

(3) The zoning administrator may approve an exemption to this requirement for the following activities:

   (a) Routine maintenance and repair of erosion and sediment control measures;

   (b) Activities located at or waterward of the ordinary high water mark subject to state, federal, and/or local (per Chapter 16.16 WCC and/or WCC Title 23) conditions of approval requiring commencement of clearing activity between October 1st and May 31st for purposes of minimizing surface water disturbance and site inundation by high water or wave action;

   (c) Activities necessary to address an emergency that presents an unanticipated and imminent threat to public health, safety or the environment that requires immediate action within a time too short to allow full compliance with this section. Upon abatement of the emergency situation, the clearing activity shall be reviewed for consistency with this chapter and may be subject to additional permit requirements; provided, that the applicant shall make a reasonable attempt to contact the zoning administrator prior to the activity. When prior notice is not feasible, notification of the action shall be submitted to the zoning administrator as soon as the emergency is addressed and no later than two business days following such action. Emergency construction does not include development of new permanent protective structures where none previously existed.

   (d) The proposed activity does not involve the conversion of forest land, is outside critical areas and associated buffers, and is exclusively related to agriculture as defined in this title; or

   (e) The proposed activity consists of nonconversion forest practices, other than Class IV-General forest practices on platted land, and other than those with an approved COHP regulated under Chapter 76.09 RCW; or

(4) To ensure compliance with subsection (2) of this section, Whatcom County planning and development services shall not issue development permits requiring more than 500 square feet of land disturbance located within the Lake Whatcom watershed within two weeks prior to the watershed seasonal closure on October 1st.

(5) Soil disturbance associated with an exempt clearing activity shall be minimized to the maximum extent practicable. The zoning administrator shall have the authority to condition an exempt activity to ensure that temporary erosion and sediment control measures will be implemented.
(6) An exemption from the seasonal land clearing requirements of this section does not grant authorization for any work to be done in a manner that does not comply with other provisions of this chapter or other applicable development regulations.

(7) Within the Lake Whatcom Watershed Overlay District, clearing activity must conform to the following conditions:

(a) Temporary erosion and sediment control shall be installed and inspected prior to any clearing activity. The technical administrator shall conduct periodic inspections to ensure the integrity of temporary erosion and sediment controls. Temporary erosion and sediment control measures include, but are not limited to, installation of silt fencing, installation of check dams, covering of excavation piles, and mulching of exposed soils, as specified in the Whatcom County Development Standards.

(b) Phased Clearing. Construction activities and clearing activities shall be phased to limit the amount of exposed soil that occurs at any one time, if determined to be appropriate by the technical administrator, based on site characteristics or constraints including, but not limited to, slopes, proximity to shorelines and wetlands. A phased clearing plan may be required. A phased clearing plan, if required, shall be submitted for review and approval by the technical administrator prior to any clearing activity and shall contain a detailed construction schedule or timeline.

(c) Soil Stabilization. All disturbed areas shall be provided with soil stabilization within two days of the time of disturbance. The technical administrator may approve an exemption to this requirement when a tree canopy area retention plan includes a soil stabilization plan. This plan component must specifically detail erosion and sediment control and stormwater runoff measures that provide runoff control equal to or greater than the protection provided by the standard two-day soil stabilization requirements of this section.

**20.51.420 Permanent Stormwater Management Systems**

(1) Exemptions. This section does not apply to any of the following projects, work, or activities (which does not necessarily exempt them from other stormwater related titles and/or standards that might otherwise apply; see WCC 20.51.040(6), WCC 20.51.040(7) and WCC 20.80.630(3)) within the Lake Whatcom Watershed Overlay District:

(a) Installations of, and/or repairs to, and/or replacements of, any of the following facilities:

1. Below grade:
   i. Pipe,
   ii. Conduit,
EXHIBIT A - Whatcom County Code Proposed Chapter 20.51

iii. Ductwork,

iv. Cabling and wiring (direct burial or conduit encased),

2. Above grade:

i. Utility or light poles,

ii. Communication and/or data transmission systems pedestals,

3. Below grade, at grade, and/or above grade appurtenances to any of the above respective facilities.

(b) Roof replacements and/or conversions at the same, or less, surface area.

Conversions to metal roofs require coatings with inert non-leachable materials.

(c) Deck, porch, and/or other raised surfaces area replacements at the same, or less, surface area.

(d) Land disturbing activities (per WCC 20.97 definition) of less than 5,000 square feet in total area, excluding any impervious surface area work within the land area disturbed.

(e) Projects, work, or activities that will create less than:

1. 501 square feet of previously nonexistent impervious surface area and/or permeable pavement area (per WCC 20.97 definitions), and/or

2. 1,501 square feet of replaced impervious surface area and/or replaced permeable pavement area (per WCC 20.97 definitions).

(f) Any new parcels created by a proposed subdivision or short subdivision (per WCC 21.10.020(32) definition) if the created parcel(s) is/are greater than 22,000 gross square feet in area.

(gf) Maintenance (e.g., debris, moss, and/or mildew removal) of existing impervious surface areas and/or permeable pavement areas. Pre-existing nonconforming impervious surfaces may be routinely maintained/repaiired.

(hg) If a legal nonconforming structures are destroyed, the nonconforming use may be reconstructed using the pre-existing footprint. Damage repairs (e.g., from fire, wind, falling trees or limbs, flooding) to existing impervious surface areas and/or permeable pavement areas within their same respective existing footprints. Expansion of nonconforming impervious surfaces shall be subject to this ordinance.

(h) For a Single Family Dwelling that meets all of the following:

1. To be located within the platted boundaries of, and in general belonging to, an incorporated homeowners association; and

Comment [PG34]: Clarified language Natural Resource Committee May 7, 2013

Comment [PG35]: Plats are not required to install stormwater bmp's for future development (see change to .420(2)(a)(3)), only a stormwater plan. Stormwater manual reference to 22,000 sf no longer applies.

Comment [PG36]: Natural Resource Committee discussion May 21, 2013
EXHIBIT A—Whatcom County Code Proposed Chapter 20.51

2. Which association has a stormwater runoff management and phosphorus mitigation plan that provides at least the same level of overall protection from and/or treatment of phosphorus runoff to Lake Whatcom as would the application of WCC 20.51.420(2) to any of the individual parcels therein that may be developed; and

3. Ongoing implementation program, applicable to all newly developed parcels within that association’s boundaries, as well as to the association as a whole; and

4. Which plan and program have been agreed to by a memorandum of agreement between Whatcom County and the Incorporated Homeowners Association; and

(2) Best Management Practices.

(a) Unless otherwise exempt per WCC 20.51.420(1), or unless a standard land use vesting determination concludes otherwise, all projects, work, or activities, including subdivisions, binding site plans, and non-exempt new short subdivision parcels, proposed to occur within the Lake Whatcom Watershed Overlay District shall incorporate presumptive BMPs and/or demonstrative BMPs, per WCC 20.51.420(2)(c) and/or WCC 20.51.420(2)(d), respectively, to:

(1) All project, work, or activity affected:

i. Net land area disturbed (per WCC 20.97 definition, and/or

ii. Newly created and/or replaced:

A. Net new impervious surface area (per WCC 20.97 definition), and/or

B. Net replaced impervious surface area (per WCC 20.97 definition), and/or

C. Net new permeable pavement area (per WCC 20.97 definition), and/or

D. Net replaced permeable pavement area (per WCC 20.97 definition), and/or

   iii. The land area subdivided, and/or

(2) Existing off-parcel phosphorus-unmitigated areas and/or on-parcel phosphorus-unmitigated areas within the entire Lake Whatcom Watershed at a 2:1 ratio of phosphorus-unmitigated area to the corresponding project, work, or activity affected area(s) that WCC 20.51.420(2)(a)(1)(i) – (ii) outlines.
EXHIBIT A—Whatcom County Code Proposed Chapter 20.51

(3) The developable areas and infrastructure as required for long and short subdivision approval. A stormwater management plan for developable areas and required infrastructure, consistent with the 2012 Stormwater Management Manual for Western Washington is required prior to primarily plat approval. Installation of required BMPs for infrastructure is required prior to final plat approval.

(b) The development stormwater runoff (per WCC 20.97 definition) phosphorus loading profile from each phosphorus-mitigated area noted in WCC 20.51.420(2)(a)(1) & (2) shall not exceed by a factor of 1.25 the corresponding natural stormwater runoff (per WCC 20.97 definition) phosphorus loading profile from each respective phosphorus-mitigated area.

(c) Presumptive BMPs (per WCC 20.97 definition). Presumptive BMPs, which are combinable with each other and with demonstrative BMPs, follow:

1. Full infiltration and downspout full infiltration. See the 2012 current Stormwater Management Manual for Western Washington (per WCC-20.97 definition) BMP T5.10A Volume III Section 3.1.1 and (per WCC-20.97 definition) Volume III Chapter III Section 3.3.9(A). Use of these BMPs may require an engineered design (per WCC 20.97 definition).

2. Full dispersion:

i. See current Stormwater Management Manual for Western Washington Volume V Chapter 5 BMP T5.30. This BMP might, but does not necessarily, require an engineered design. See current the 2012 Stormwater Management Manual for Western Washington Volume V, Chapter 5, pages 5-30 through 5-38 for further design requirements and infeasibility criteria.

ii. See current Stormwater Manual Volume III Appendix C paragraph 7.2.1. Use of this BMP requires an engineered design. If impervious surface areas exceed 10% of the site, those excess impervious surface areas shall not drain to the native vegetation area. The excess impervious surface areas are subject to the treatment and flow control requirements of WCC 20.51.420(2)(a)(1), and/or WCC 20.51.420(2)(a)2.i, and/or WCC 20.51.420(2)(a)2.iii, and/or WCC 20.51.420(2)(a)(3).

iii. See current Stormwater Manual Volume III Appendix C paragraph 7.2.2. Use of this BMP requires an engineered design.

3. Flow dispersion and infiltration. See current Stormwater Manual Volume III Appendix C paragraph 7.2.4. Use of this BMP requires an engineered design. This BMP, which is primarily used for road projects, is adaptable to residential projects where Type A Outwash Soils already exist, and/or are imported and established per the stated criteria.
EXHIBIT A—Whatcom County Code Proposed Chapter 20.51

(d) Demonstrative BMPs (per WCC 20.97 definition). Demonstrative BMPs, which are
combinable with each other and with presumptive BMPs, use engineered designs
that, once constructed or installed, and presuming that system preservation
activities occur as prescribed by the design engineer, will satisfy

*Current the 2012 Stormwater Management Manual for Western Washington Minimum Requirements*

numbers 3 – 8, and 10 through 9, disregarding any Minimum Requirement
applicability thresholds therein, while also conforming to at least one of the
following:

1. The engineered design limits the estimated phosphorus loading in development
stormwater runoff to less than 0.1875 lb of P/acre/year. Engineered designs
shall cite and use only WSDOE-approved references for estimated phosphorus
loading information and criteria.

2. The monthly development stormwater runoff volume does not exceed the
monthly natural stormwater runoff volume of the project, work, or activity
affected areas, as determined by a WSDOE-approved continuous runoff model.

3. Development stormwater runoff does not occur

(3) System Recording, Protection, and Maintenance. A declaration of covenant shall be
recorded for each property where permanent stormwater BMPs exist. The covenant is
used to protect the stormwater management facilities from cover by structures or
impervious material, soil compaction, and damage by soil removal and grade alteration.
A draft of the proposed covenant must be reviewed and approved by Whatcom County
prior to recording. All required covenants must be recorded prior to final permit
issuance for the proposed project.

(a) Notice on Title: For all permanent stormwater facilities, the type of stormwater
system and location shall be recorded with the County Auditor real estate records in a
format similar to the recording documents in Whatcom County Development
Standards, Chapter 2, Section 221. The recording document provides notice to future
owners of the presence of stormwater system on the lot, and shall contain:

(i) A site plan to scale, showing the location and descriptions of stormwater
facilities, treatment BMPs, terrain features, Protective Native Growth Areas, and
stormwater flowpaths.

(ii) Notice of the property owner’s responsibility to retain, uphold, and protect
the devices, features, pathways, Protective Native Growth Areas, and operate
and maintain BMPs at the owner’s expense.

(b) Protected Native Growth Area (PNGA): For projects that utilize dispersion for
their stormwater system, a Protected Native Growth Area covenant shall be required to
meet the following criteria:
EXHIBIT A-Whatcom County Code Proposed Chapter 20.51

(i) Include native plant species including, but not limited to, those on approved lists provided by Whatcom County common to this region.

(ii) Be described in the recorded documents as "a Protected Native Growth Area established for the purposes of dispersing and treating stormwater flows."

(iii) Retain all vegetation and trees within the PNGA at the time of permit application aside from approved timber harvest activities and the removal of hazardous and diseased trees. Hazard trees, as defined in Chapter 20.97 WCC, are identified by an evaluation and determination by an ISA licensed arborist may be required.

(iv) The PNGA can include onsite critical areas and its buffer.

(v) Limit uses in the PNGA shall be limited to those specified in WCC 16.16.

(vi) Provide a Notice of Activity consistent with WCC 16.16.235, to remove trees within a PNGA when a permit is not required by 20.51.420(1), trees may be removed within a PNGA with a Notice of Activity consistent with 16.16.235 under the following circumstances:

1. Fire prevention methods when supported by the county fire marshal;
2. Hazard trees, as defined in Chapter 20.97 WCC, are identified by an evaluation and determination by a licensed arborist may be required;
3. Encroachments where the trunk, branches, or roots would be, or are in contact with main or accessory structures; or
4. Where installation and/or maintenance of roads or utilities would unavoidably require removal or cutting through the root system.

20.51.420 Forest Area Preservation.

For the intent and purpose of this chapter, the term “Forested Area” shall refer to the tree canopy and any native vegetation (as defined by the most current version of the Washington State Department of Ecology Stormwater Management Manual for Western Washington) that occurs within the boundaries of the tree canopy. (1) When a permit is not required by 20.51.420(1), tree canopy areas may be removed when limited to those canopy areas affected under the following circumstances:

(1) Fire prevention methods when supported by the county fire marshal;
(2) Hazard trees, as defined in Chapter 20.97 WCC, are identified by an evaluation and determination by a licensed arborist may be required;
(3) Encroachments where the trunk, branches or roots would be, or are in contact with main or accessory structures; or
(4) Where installation and/or maintenance of roads or utilities would unavoidably require removal or cutting through the root system.

Comment [PjG43]: Language cleaned up based on Nat Resource Committee comments on 5/7/2013.

Comment [PjG44]: Changes made at 5/7/2013 Natural Resource Committee. Forest Area Preservation is clarified as a Protective Native Growth Area, with applicable sections moved to 20.51.420(3)(b)].

**20.71.010 Purpose.**
The Water Resource Protection Overlay District is an overlay zone that is intended to impose additional controls to preserve and protect unique and important water resources within Whatcom County. This district is designed to protect the long-term viability of the Lake Whatcom, Lake Samish and Lake Padden watersheds while creating a regulatory framework to address the needs of these watersheds that are not otherwise provided for in the underlying zone districts. (Ord. 2009-009 Exh. A, 2009; Ord. 2005-085 § 1, 2005; Ord. 2004-007 § 1, 2004; Ord. 2003-049 § 1, 2003; Ord. 2003-032 Exh. A, 2003; Ord. 2002-075, 2002; Ord. 2002-034, 2002; Ord. 2001-021 § 1, 2001; Ord. 99-086, 1999).

**20.71.020 Application.**

**20.71.021 Area and applicability.**
Exhibit B – Removal of “Lake Whatcom watershed” reference in Whatcom County Code Sections 20.71, 20.80.635, and 20.80.735

(1) The Water Resource Protection Overlay District is an overlay zone that covers the entire geographic area of the Lake Whatcom, Lake Samish and Lake Padden watersheds within Whatcom County’s jurisdiction. For purposes of this title, the Lake Samish watershed shall consist of that portion of the Friday Creek subbasin of the Samish River watershed that lies within Whatcom County.

(2) This district may be expanded to include other areas through the annual zoning text amendment process.

(3) The Lake Samish, Lake Padden watersheds are also designated as stormwater special districts pursuant to WCC 20.80.635 and water resource special management areas pursuant to WCC 20.80.735.

(4) In the event that the provisions of this chapter conflict with the provisions of the Shoreline Management Program (WCC Title 23), Chapter 16.16 WCC, Critical Areas, the Whatcom County Development Standards, the provisions of the underlying zoning district or other applicable county policies or regulations, then the most restrictive shall apply; provided, that the minimum setback provisions established in WCC 20.71.401 shall prevail. (Ord. 2009-009 Exh. A, 2009; Ord. 2005-085 § 1, 2005; Ord. 2004-007 § 1, 2004; Ord. 2003-049 § 1, 2003; Ord. 2003-032 Exh. A, 2003; Ord. 2002-075, 2002; Ord. 2002-034, 2002; Ord. 2001-021 § 1, 2001; Ord. 99-086, 1999).

20.71.050 Permitted uses.
All permitted uses in the underlying zone districts are permitted except as expressly prohibited, made conditional, or further conditioned by this chapter.

20.71.100 Accessory uses.

20.71.150 Conditional uses.
All conditional uses in the underlying zone districts shall remain conditional uses unless expressly prohibited, made conditional, or further conditioned by this chapter. In addition, the following uses shall only be conditionally permitted:

.151 On-site storage facilities for hazardous wastes associated with outright permitted uses or approved conditional uses, other than cottage industries as defined in WCC 20.71.215, subject to the most current
Exhibit B – Removal of “Lake Whatcom watershed” reference in Whatcom County Code Sections 20.71, 20.80.635, and 20.80.735

siting criteria under Chapter 173-303 WAC within the Rural, Rural Forestry, Commercial Forestry, Neighborhood Commercial and Resort Commercial Zone Districts only.

.152 Retail or wholesale plant nurseries or greenhouses for storage, propagation and culture of plants, provided:

(1) Greenhouses shall not be larger than 1,000 square feet.

(2) Greenhouses and cultivated ground shall not be located within 250 feet of Lake Whatcom, Lake Samish, Lake Padden or streams subject to the Shoreline Management Program; 200 feet from fish-bearing streams; or 150 feet from other streams and their tributaries that flow into Lake Whatcom, Lake Samish or Lake Padden.

(3) A monitoring program has been established to ensure that chemical and pesticide quantities in stormwater runoff do not exceed state water quality standards. Complete control of drainage from the operation shall be in effect. Such runoff will be tested for pollutants bimonthly by a licensed water quality testing agency. All requirements will be met at the owner’s expense.

(4) No person shall apply a commercial fertilizer, either liquid or granular, that is labeled as containing more than zero percent phosphorous or other compound containing phosphorous, such as phosphate; provided, that such fertilizers may be used for establishment of new vegetation in the first growing season.

.185 Type I solid waste handling facilities, except:

(1) Moderate risk waste facilities; and

20.71.200 Prohibited uses.
In addition to the uses prohibited in the underlying zone districts, the following uses are prohibited, except as per Chapter 20.83 WCC:

.201 Dry cleaning establishments.

.202 Gas stations, service stations, combustion engine repair garages and automotive wrecking yards.

.203 Sod farming.

.204 Aquaculture and mariculture projects.
Operation of fur farms.

Confinement feeding operations.

Asphalt and concrete batch plants.

Gravel bar scalping projects within the jurisdiction of the Shoreline Management Program.

Utilization of sewage sludge on land.

On-site treatment facilities for hazardous wastes.

Type I solid waste handling facilities, except those specified in WCC 20.71.185.

Type II and Type III solid waste handling facilities.

Golf courses.

Cemeteries.

Cottage industries that would require on-site hazardous waste storage facilities.

Surface mining outside of designated Mineral Resource Lands (MRL) Special Districts; provided, that surface mining, rock crushing, washing and sorting subject to the Forest Practices Act (Chapter 76.09 RCW) are permitted.

Major passenger intermodal terminals.

Freight railroad switching yards and terminals.

Agriculture, including animal husbandry, horticulture, viticulture, floriculture, and the cultivation of crops.

Animal hospitals and accessory kennels and stables.

Open space and impervious surfaces.

Open space requirements shall be as follows:

(1) For uses in the TC and NC Zones, at least 25 percent of the parcel shall be reserved as open space.
(2) For uses in the RC Zone, at least 40 percent of the parcel shall be reserved as open space.

(3) Open space areas shall be maintained in natural vegetation or landscaped per WCC 20.80.325.

(4) For properties within the jurisdiction of the Shoreline Management Program (WCC Title 23), submerged lands and/or tidelands within the boundaries of any waterfront parcel that are located waterward of the ordinary high water mark shall not be used in open space calculations.

.302 Impervious surface requirements shall be as follows:

(1) For uses in the UR, URM and RR Zone Districts, at least 80 percent of the lot or parcel shall be kept free of structures and impervious surfaces.

(2) For uses in the R Zone District, at least 90 percent of the lot or parcel shall be kept free of structures and impervious surfaces.

(3) Where subsection (1) or (2) of this section does not allow 2,500 square feet of total impervious surface area, 2,500 square feet shall be allowed.

(4) Two or more lots of record consolidated pursuant to the provisions of WCC 20.83.070 shall be treated as one undivided parcel for the purpose of calculating total allowable impervious surface. Where two or more lots or parcels are consolidated; are not subject to the provisions of WCC 20.83.070; and are not subject to a permanent restrictive covenant that precludes development of buildings, structures or other improvements not otherwise identified by said covenant, 4,000 square feet of impervious surface shall be allowed.

(5) Preexisting nonconforming impervious surfaces may be routinely maintained/repai red or redeveloped; provided, that if 50 percent or greater of the preexisting nonconforming impervious area is to be redeveloped, then the applicable impervious surface limitations of subsections (1), (2) and (3) of this section shall apply. However, if a legal nonconforming structure is destroyed, the nonconforming use may be reconstructed using the pre-existing footprint. Expansion of nonconforming impervious surfaces shall be prohibited.

(6) A mobile home within an existing mobile home park may be replaced with a larger mobile home (not to exceed a maximum of 1,500 square feet), provided there is not an increase in the overall number of mobile homes in the park or any increase in other impervious surfaces beyond the new mobile home footprint.

(7) For properties within the jurisdiction of the Shoreline Management Program (WCC Title 23), submerged lands and/or tidelands within the boundaries of any waterfront parcel that are located waterward of the ordinary high water mark shall not be used in impervious/pervious surface calculations.
(8) Any portion of a roof overhang or other overhanging architectural feature which projects further than three feet from the footprint of a structure shall be calculated as impervious surface.

20.71.350 Cluster subdivisions.
The purpose of cluster subdivision is to provide a method of creating building lots with spatially efficient sizes. Clustering is intended to consolidate development and associated infrastructure, reduce development costs, and increase infrastructure efficiency. Clustering is also intended to help preserve open space and the character of areas, reduce total impervious surface area, and minimize development effects on critical areas and associated buffers, as defined in Chapter 16.16 WCC, and resource lands. Preservation of open space is thereby intended to reduce potential stormwater runoff and associated impacts while assuring protection of viable, undeveloped, and naturally vegetated corridors for wildlife habitat, protection of watersheds, preservation of critical areas, preservation of aesthetic values including view corridors, and preservation of trail and/or recreation areas. (Ord. 2009-009 Exh. A, 2009; Ord. 2005-085 § 1, 2005; Ord. 2005-048 Exh. A, 2005; Ord. 2004-007 § 1, 2004; Ord. 2003-049 § 1, 2003; Ord. 2003-032 Exh. A, 2003; Ord. 2002-075, 2002; Ord. 2002-034, 2002; Ord. 2001-021 § 1, 2001; Ord. 99-086, 1999).

20.71.351 Cluster design standards.
The creation of new building lots within Water Resource Protection Overlay Districts shall be subject to the following design standards:

(1) Cluster subdivisions shall be required for all land divisions resulting in lots less than five acres in size, with the exception of boundary line adjustments.

(2) A cluster subdivision shall include a permanent open space reserve area meeting the criteria established in WCC 20.71.352.

(3) The minimum cluster lot size requirements of the underlying zone district shall apply.

(4) The maximum number of building lots in a lot cluster shall be 10.

(5) Clusters containing two or more lots of less than one acre within a proposed development shall be separated by at least 80 feet.

(6) Clustered building lots may only be created through the subdivision, short subdivision or binding site plan process pursuant to WCC Title 21.
Exhibit B – Removal of “Lake Whatcom watershed” reference in Whatcom County Code Sections 20.71, 20.80.635, and 20.80.735

(7) Building lots shall be designed and located to be compatible with, and avoid disturbance of, critical areas or other valuable or unique natural resources or known archaeological sites, as well as physical constraints of the site.

(8) Building lots shall be arranged in a cluster/concentrated pattern.

(9) A cluster subdivision shall have no more than two common encroachments on existing county roads unless site constraints require additional road access. The arrangement of clustered building lots shall be designed to avoid development forms commonly known as linear, straight line or highway strip patterns.

(10) As applicable, interior streets shall be designed to allow future vehicular access to any portion of the reserve tract which may be divided into future building lots; provided, that the required permanent open space reserve area, pursuant to WCC 20.71.352, shall not be further subdivided. (Ord. 2009-009 Exh. A, 2009; Ord. 2005-085 § 1, 2005; Ord. 2005-048 Exh. A, 2005; Ord. 2004-007 § 1, 2004; Ord. 2003-049 § 1, 2003; Ord. 2003-032 Exh. A, 2003; Ord. 2002-075, 2002; Ord. 2002-034, 2002).

20.71.352 Open space reserve area.

(1) For purposes of this title, an “open space reserve area” shall be defined as that portion of a subdivision or short subdivision set aside in accordance with this chapter, and permanently dedicated for active or passive recreation, critical area protection, natural resource or archaeological site preservation, wildlife habitat and/or visual enjoyment, and shall be consistent with the definition of “open space” pursuant to WCC 20.97.275.

(2) The open space reserve area shall be subject to the following provisions:

(a) The minimum open space reserve area shall be determined by the minimum cluster subdivision reserve area requirements of the underlying zone district.

(b) A permanent open space reserve area shall be protected using one of the following mechanisms:

(i) Placement in a separate nonbuilding tract owned in common by all lots within the subdivision; or

(ii) Covered by a protective easement or public or private land trust dedication which protects at least the minimum required cluster reserve area specified in the underlying zone district; or

(iii) Preserved through an appropriate permanent protective mechanism that provides the same level of permanent protection as subsection (2)(b)(i) of this section as determined by
the county zoning administrator or hearing examiner which applies to at least the minimum required cluster reserve area specified in the underlying zone district.

(c) The boundaries of the open space portion of the reserve area may be altered only if the county finds that in dedicating adjacent reserve areas it would further the objectives listed in WCC 20.71.350 by altering the reserve area and increasing the area of reserve proportionately on the adjacent land being subdivided so that there is no net reduction in open space reserve area.

(d) The purpose of the open space reserve area as defined in subsection (1) of this section shall be recorded on the face of the final plat or short plat.

(e) The remaining unused development density and/or impervious surface allowances remaining on the parcel containing the open space reserve area, based on the gross density of the parent parcel, may be assigned to that portion of the reserve tract not subject to the minimum area requirements of subsection (2)(b) of this section. The density shall be recorded on the face of the final plat or short plat. The development rights assigned to the reserve tract in accordance with this subsection may not be transferred if the pervious surface area associated with the reserve tract has been transferred to the other building lots within the subdivision.

(f) The requirements stated in subsections (2)(c) and (d) of this section shall be recorded as a restriction on the face of the final plat or short plat, and shall constitute an agreement between Whatcom County and the current/future owner(s) of record that shall run with the land. Said restriction(s) may be amended by mutual agreement between said parties after review for consistency and compliance with the official Whatcom County Zoning Ordinance, the Whatcom County Subdivision Ordinance, and the Whatcom County Comprehensive Plan.

20.71.400 Building setback/buffer areas.

.401 Setbacks for all properties within the overlay district shall be as follows: Class I and Class II roads shall have a minimum setback of 30 feet; and Class III, IV and V roads shall have a minimum setback of 20 feet; provided, that the road right-of-way meets the minimum standard for road rights-of-way pursuant to the Whatcom County Development Standards.

.402 Roof overhangs or other overhanging architectural features shall not project further than 18 inches into the side or rear yard setbacks. Such overhangs may extend three feet into the front yard setback;

20.71.600 Development criteria.

20.71.601 Parking space dimensions.
A standard parking space shall have the rectangular dimensions of 10 feet in width and 20 feet in length; provided, that for any parking area of six or more spaces, 50 percent of all spaces may have the rectangular dimensions of eight feet in width and 15 feet in length; and further provided, that these spaces are marked for use by compact automobiles. Except in single-family residential areas, all dimensions shall be exclusive of driveways, aisles and other circulation areas required under WCC 20.80.560 and 20.80.570. (Ord. 2009-009 Exh. A, 2009; Ord. 2005-085 § 1, 2005; Ord. 2004-007 § 1, 2004; Ord. 2003-049 § 1, 2003; Ord. 2003-032 Exh. A, 2003; Ord. 2002-075, 2002; Ord. 2002-034, 2002; Ord. 2001-021 § 1, 2001; Ord. 99-086, 1999).

20.71.602 Parking requirements.
Parking shall conform to the requirements of WCC 20.80.500 through 20.80.590 unless otherwise specified in this section. Minimum parking requirements may be reduced through any of the following methods:

(1) A shared parking agreement has been filed with the county auditor establishing a shared parking lot for land uses with noncompeting hours of operation, or for multitenant retail and commercial facilities; provided, the parking lot is not located further than 700 feet from any of the uses it is intended to serve.

   (a) The minimum required parking in shared facilities shall be based on the land use with the highest parking demand.

   (b) Mixed use developments with similar operating hours may be required to submit a parking demand study to determine if parking can be combined.

(2) A 20 percent reduction may be approved if an establishment is located within 1,000 feet of any regularly scheduled bus stop.

(3) The zoning administrator determines that a reduced requirement will reduce overall impervious surfaces while maintaining consistency with this title. (Ord. 2009-009 Exh. A, 2009; Ord. 2005-085 § 1,
20.71.603 Alternative surfacing methods.
Alternative surfaces including, but not limited to, bark or wood mulch, washed gravel, grid/lattice systems, permeable interlocking pavers, pervious concrete, porous asphalt, and other similar approved materials are encouraged. Alternative surfacing methods may be approved for fringe or overflow parking areas; emergency parking areas, private roads, fire lanes, road shoulders, bike paths, walkways, patios, driveways, and easement service roads in residential or commercial zones unless site constraints make use of such materials detrimental to water quality. Utilization of alternative surfacing methods shall be subject to review and approval by the Whatcom County public works department, the fire marshal and/or the county ADA coordinator for compliance with other applicable regulations and development standards. Surfaces shall be considered impervious surfaces under WCC 20.71.300 unless the following conditions are met:

(1) Bark, wood mulch, and washed gravel shall be designed and installed so that all rain water falling upon the alternative surface will be infiltrated directly beneath the alternative surface without generating surface runoff based on the one-year, 24-hour storm event.

20.71.604 Vehicular access.
Driveways and curb cuts shall be minimized along all arterial and collector roads. Each existing lot shall be allowed only one driveway or curb cut; adjacent lots are encouraged to share access points. In new developments, lots or leased sites shall be oriented toward internal driveways, parking areas, or roads with limited access to arterial or collector roads. (Ord. 2009-009 Exh. A, 2009; Ord. 2005-085 § 1, 2005; Ord. 2004-007 § 1, 2004; Ord. 2003-049 § 1, 2003; Ord. 2003-032 Exh. A, 2003; Ord. 2002-075, 2002; Ord. 2002-034, 2002; Ord. 2001-021 § 1, 2001; Ord. 99-086, 1999).

20.71.700 Roads, curbs, gutters and sidewalks.
The intent of this section is to reduce impervious surfaces and stormwater runoff. Innovative street sections, which do not compromise public safety, shall be encouraged in the watershed. Narrow streets and reduced sidewalk standards that satisfy pedestrian and vehicular circulation requirements may be implemented with the approval of the Whatcom County public works department. Unless specifically
Exhibit B – Removal of “Lake Whatcom watershed” reference in Whatcom County Code Sections 20.71, 20.80.635, and 20.80.735

20.80.635 Stormwater special districts.
(1) Whatcom County shall establish the following geographical areas as stormwater special districts:

(a) Drayton Harbor watershed.

(b) Lake Whatcom watershed.

(c) Lake Samish watershed.

(d) Birch Bay watershed.

(e) Lake Padden watershed.

20.80.636 Stormwater special district requirements.
In areas designated as stormwater special districts (per WCC 20.80.635), permanent on-site stormwater quality and quantity facilities shall be required on all lots less than five acres in size for projects that meet either of the following criteria:

(1) New construction or remodels that increase impervious surfaces by more than 500 square feet; or

(2) Renovation projects where the estimated cost of the work exceeds 50 percent of the assessed value of the existing structure. Interior remodels, nonpolluting roof replacements, house maintenance and energy upgrades shall be exempt from this requirement.

If stormwater quality and quantity facilities are required based on either of these criteria, the provisions of the Whatcom County Development Standards, Chapter 2, Section 221, shall apply to the entire property, unless it can be demonstrated that off-site facilities would provide better treatment, or unless common detention and water quality facilities meeting the standards of the 1996 Whatcom County Development Standards or the 1992 Department of Ecology Stormwater Management Manual for the Puget Sound
Exhibit B – Removal of “Lake Whatcom watershed” reference in Whatcom County Code Sections 20.71, 20.80.635, and 20.80.735

20.80.735 Water resource special management areas.

The purpose of a water resource special management area is to establish a more stringent standard for clearing activity in highly valued water resource areas, environmentally sensitive areas, or areas where natural conditions are so unstable that clearing activity in the areas can result in hazardous conditions. Implementation of best management practices, including phased clearing, tree retention and seasonal clearing limitations, is intended to limit the amount of exposed soils on site that are susceptible to erosion at any one time, thereby improving site stability during development and reducing potential for transport of dissolved pollutants and sediments off site. Preservation of existing trees on site also reduces the quantity and maintains the quality of stormwater leaving a site during and after development activities by encouraging interception, infiltration and evapotranspiration of rainfall and surface runoff.

Whatcom County shall establish the following geographic areas as water resource special management areas:

- Lake Whatcom watershed;
- Drayton Harbor watershed;
- Lake Padden watershed;
- Lake Samish watershed; and
- Birch Bay watershed.

(1) Water Resource Special Management Area Review Thresholds. County review and approval shall be required for clearing activities which exceed the following thresholds. If the clearing activity does not meet the threshold criteria, county review is not required. However, the owner is still subject to, and must comply with, the minimum requirements established in this chapter and in the Whatcom County Development Standards.

(a) Lake Whatcom, Lake Samish and Lake Padden Watersheds. County review and approval shall be required for all clearing activities associated with a fill and grade permit, building permit or other
development proposal. Clearing activities which are not associated with a development permit shall require county review if they are:

(i) Five thousand square feet or greater during the dry season, June 1st through September 30th; or

(ii) Five hundred square feet or greater during the wet season, October 1st through May 31st.

(2) Within water resource special management areas, clearing activity must conform to the following conditions:

(a) Temporary erosion and sediment control shall be installed and inspected prior to any clearing activity. The technical administrator shall conduct periodic inspections to ensure the integrity of temporary erosion and sediment controls. Temporary erosion and sediment control measures include, but are not limited to, installation of silt fencing, installation of check dams, covering of excavation piles, and mulching of exposed soils, as specified in the Whatcom County Development Standards.

(b) Phased Clearing. Construction activities and clearing activities shall be phased to limit the amount of exposed soil that occurs at any one time, if determined to be appropriate by the technical administrator, based on site characteristics or constraints including, but not limited to, slopes, proximity to shorelines and wetlands. A phased clearing plan may be required. A phased clearing plan, if required, shall be submitted for review and approval by the technical administrator prior to any clearing activity and shall contain a detailed construction schedule or timeline.

(c) Soil Stabilization. All disturbed areas shall be provided with soil stabilization within two days of the time of disturbance. The technical administrator may approve an exemption to this requirement when a tree canopy area retention plan includes a soil stabilization plan. This plan component must specifically detail erosion and sediment control and stormwater runoff measures that provide runoff control equal to or greater than the protection provided by the standard two-day soil stabilization requirements of this section.

(d) Tree Canopy Area Retention. In the Lake Whatcom, Lake Samish and Lake Padden watersheds, in addition to compliance with all other requirements of this title and other titles of the Whatcom County Code, clearing activities on any lot or parcel, with the exception of nonconversion forest practices occurring on lands platted after January 1, 1960, shall comply with the following provisions:

(i) Existing tree canopy areas, as defined by the dripline of the tree(s), may be removed for purposes of a building site, driveways, parking areas, and areas to be landscaped, but such
areas shall not exceed a cumulative total of 5,000 square feet or 35 percent of the existing tree canopy area, whichever is greater.

(ii) The following criteria shall be used to determine which tree canopy areas are to be prioritized for retention:

(A) Stands of mature native trees;

(B) Trees on sensitive slopes, on lands classified as having landslide hazards, or high erosion hazards, as defined under the critical areas ordinance;

(C) Trees within critical areas or their associated setback and/or buffer areas as defined under WCC Title 16 or 23; or

(D) Trees with significant habitat value as identified by a qualified wildlife biologist or by the technical administrator, per WCC Title 16.

(iii) Existing trees and vegetation may be used to meet all or part of the landscaping requirements of this title.

(iv) The county shall require that tree canopy areas to be retained are identified on a site plan and clearly flagged, or delineated, on the site. A tree canopy area retention plan must accompany a project or clearing permit application and be approved by the technical administrator before clearing activity takes place. The plan shall contain the following components:

(A) A scaled drawing identifying the following:

1. North arrow;

2. Property boundaries;

3. Existing structures;

4. Site access;

5. Tree canopy areas to be removed;

6. The outer dripline of tree canopy areas to be retained;

7. Critical areas including, but not limited to, slopes, wetlands, and habitat conservation areas;
Exhibit B – Removal of “Lake Whatcom watershed” reference in Whatcom County Code Sections 20.71, 20.80.635, and 20.80.735

8. Protection measures to be utilized for areas that will be undisturbed; and

9. Areas to be replanted pursuant to subsection (2)(d)(vii) of this section;

(B) A planting schedule that indicates the time frame for replanting of trees as applicable; and

(C) Provisions for maintenance and monitoring.

(v) Prior to any clearing activity or development activity, any tree canopy area designated for retention shall be delineated by temporary fencing, tape, or other indicators around the outer dripline of the trees. Temporary fencing, tape, or other indicators shall be clearly visible and shall be maintained for the duration of the proposed clearing or development activity. Any tree canopy areas designated for retention shall be field verified by the technical administrator before clearing activities begin. Trees within canopy areas designated for retention shall not be damaged by clearing, excavation, ground surface level changes, soil compaction, or any other activities that may cause damage to roots or trunks. Machinery, impervious surfaces, fill and storage of construction materials shall be kept outside of the dripline of the tree canopy areas designated for retention.

(vi) Tree canopy areas may be removed when limited to those canopy areas affected under the following circumstances:

(A) Fire prevention methods when supported by the county fire marshal;

(B) Hazard trees, as defined in Chapter 20.97 WCC, are identified (an evaluation and determination by a licensed arborist or forester may be required);

(C) Encroachments where the trunk, branches or roots would be, or are, in contact with main or accessory structures; or

(D) Where installation and/or maintenance of roads or utilities would unavoidably require removal or cutting through the root system.

(vii) In the event that tree canopy areas in excess of the applicable threshold must be removed to facilitate reasonable use of the site, or to eliminate hazard trees, not less than two replacement trees shall be planted for every tree removed. Replacement trees shall:

(A) Be of the same, or similar, native species as those trees removed from site;

(B) Be planted to re-establish tree clusters where they previously existed, or to enhance protected tree clusters;
(C) Be planted in locations appropriate to the species’ growth habitat and horticultural requirements; and

(D) Be located away from areas where damage is likely.

(viii) If any trees within canopy areas designated for retention are damaged or destroyed through the fault of the applicant, agent or successor, the applicant, their agent or successor shall restore the site pursuant to a restoration plan approved by the county.

(ix) The county may require a bond or other security in an amount not to exceed 125 percent of the merchantable timber to guarantee retention of existing trees within designated canopy areas during construction. In the event of a dispute between the landowner and the county over the established value, an assessment will be made by a professional forester or arborist whose selection will be made by mutual agreement between the county and the landowner. The fee for the services of the professional forester or arborist shall be paid by the landowner or responsible party. In the event any trees designated to be retained are removed, the county shall require that sufficient trees be re-planted to replace those previously in existence. In the event that replanting does not occur, the county may enforce upon any bond posted. Each tree removed or destroyed shall constitute a separate violation.

(e) Seasonal Clearing Activity Limitations. In the Lake Whatcom, Lake Samish and Lake Padden watersheds, clearing activity, as defined in WCC 20.97.054, that will result in exposed soils exceeding 500 square feet shall not be permitted from October 1st through May 31st; provided, that:

(i) In addition to the clearing activities exempted under WCC 20.80.733, the zoning administrator may approve an exemption to this requirement for the following activities:

(A) Routine maintenance and repair of erosion and sediment control measures;

(B) Activities located at or waterward of the ordinary high water mark subject to state, federal, and/or local (per Chapter 16.16 WCC and/or WCC Title 23) conditions of approval requiring commencement of clearing activity during the wet season, as defined in subsection (1)(a)(ii) of this section, for purposes of minimizing surface water disturbance and site inundation by high water or wave action;

(C) Activities necessary to address an emergency that presents an unanticipated and imminent threat to public health, safety or the environment that requires immediate action within a time too short to allow full compliance with this section. Upon abatement of the emergency situation, the clearing activity shall be reviewed for consistency with this chapter and may be subject to additional permit requirements; provided, that the
Exhibit B – Removal of “Lake Whatcom watershed” reference in Whatcom County Code Sections 20.71, 20.80.635, and 20.80.735

applicant shall make a reasonable attempt to contact the zoning administrator prior to the activity. When prior notice is not feasible, notification of the action shall be submitted to the zoning administrator as soon as the emergency is addressed and no later than two business days following such action. Emergency construction does not include development of new permanent protective structures where none previously existed.

(ii) To ensure compliance with subsection (2)(e) of this section, Whatcom County planning and development services shall not issue development permits requiring more than 500 square feet of land disturbance located within the Lake Whatcom, Lake Samish or Lake Padden watersheds within two weeks prior to the watershed seasonal closure on October 1st.

(iii) Soil disturbance associated with an exempt clearing activity shall be minimized to the maximum extent practicable. The zoning administrator shall have the authority to condition an exempt activity to ensure that temporary erosion and sediment control measures will be implemented.

(iv) An exemption from the seasonal land clearing requirements of this section does not grant authorization for any work to be done in a manner that does not comply with other provisions of this chapter or other applicable development regulations.

EXHIBIT C- Planning Commission Recommended definitions for WCC 20.97

**Current Stormwater Manual** - The Washington State Department of Ecology (WSDOE) Stormwater Management Manual for Western Washington edition that is in effect on the date that the County receives a complete application for the project, work, or activity.

**Demonstrative BMPs** - Those BMPs that do not otherwise qualify as presumptive.

**Development stormwater** - Stormwater that results from non-native vegetated areas.

**Development runoff** - Runoff that results from non-native vegetated areas.

**Development stormwater runoff** - Stormwater runoff that originates from non-native vegetated areas.

**Engineered design** - A design performed, and/or supervised, by a Washington State licensed professional engineer.

**Forested Area** – The area encompassed by the tree canopy and any native vegetation that occurs within the boundaries of the tree canopy.

**Hazard Tree** – Any tree that is susceptible to immediate fall due to its condition (damaged, diseased, or dead) or other factors, and which because of its location is at risk of damaging permanent physical improvements to property or causing personal injury.

**Interflow** - The portion of precipitation that infiltrates into the soil and moves laterally through the upper soil horizons until intercepted by a stream channel or until it returns to the surface, e.g., in a roadside ditch, a wetland, a spring, or a seep. Interflow is a function of the soil system depth, permeability, and water-holding capacity.

**Land disturbing activity** - Activity that results in a movement of earth or a change in the existing soil cover (both vegetative and non-vegetative) and/or the existing soil topography. Land disturbing activities include, but are not limited to clearing, grading, filling, and excavation. Compaction that is associated with stabilization of structures and road construction shall also be considered a land disturbing activity. Vegetation maintenance practices are not considered land-disturbing activity.

**May** - Permissive action.

**Native Vegetation** – Vegetation comprised of plant species, other than noxious weeds, that are indigenous to the coastal region of the Pacific Northwest and which reasonably could have been
EXHIBIT C- Planning Commission Recommended definitions for WCC 20.97

expected to naturally occur on the site. Examples include trees such as Douglas Fir, Western Hemlock, Western Red Cedar, Alder, Big-leaf Maple, and Vine Maple; shrubs such as willow, elderberry, salmonberry and salal; and herbaceous plants such as sword fern, foam flower, and fire weed. (From Department of Ecology Stormwater Manual)

**Natural runoff**- Runoff that originates from native vegetated areas.

**Natural stormwater**- Stormwater that originates from native vegetated areas.

**Natural stormwater runoff**- Stormwater runoff that originates from native vegetated areas.

**Net land area disturbed**- The quantity of disturbed native vegetated land area minus the quantity of any non-native vegetated land area converted to native vegetation by a proposed project, work, or activity.

**Net new impervious surface area**- The quantity of new minus the quantity of any existing impervious surface area converted to native vegetation by a proposed project, work, or activity.

**Net new permeable pavement areas**- The quantity of new permeable pavement area minus the quantity of any existing permeable pavement area converted to native vegetation by a proposed project, work, or activity.

**Net replaced impervious surface area**- The quantity of replaced impervious surface area minus the quantity of any existing impervious surface area converted to native vegetation by a proposed project, work, or activity.

**Net replaced permeable pavement areas**- The quantity of replaced permeable pavement area minus the quantity of any existing permeable pavement area converted to native vegetation by a proposed project, work, or activity.

**Permeable pavement**- Pervious concrete, porous asphalt, permeable pavers, or other forms of pervious or porous paving material intended to allow passage of water through the pavement section. It often includes an aggregate base that provides structural support and acts as a stormwater reservoir.

**Phosphorus-mitigated**- Areas where the development stormwater runoff phosphorus loading profile does not exceed the corresponding natural stormwater runoff phosphorus loading profile.
EXHIBIT C- Planning Commission Recommended definitions for WCC 20.97

Phosphorus neutral- Areas where the development stormwater runoff phosphorus loading profile does not exceed the natural stormwater runoff phosphorus loading profile from that area.

Phosphorus-unmitigated- Areas where the development stormwater runoff phosphorus loading profile exceeds the corresponding natural stormwater runoff phosphorus loading profile.

Presumptive BMPs- Those BMPs that will require no additional development stormwater runoff flow control or treatment per current Stormwater Manual declaration once physically established in compliance with all current Stormwater Manual criteria.

Replaced impervious surface – For structures, the removal and replacement of impervious surfaces down to the foundation. For other impervious surfaces, the removal down to bare soil or base course and replacement. (From Draft 2012 DOE Stormwater Manual)

Replaced impervious surface area- For structures, the removal and replacement of impervious surfaces down to the foundation. For other impervious surfaces, the removal down to bare soil or base course and replacement.

Replaced permeable pavement area- The removal and replacement of permeable pavement areas down to bare soil or base course and replacement.

Runoff- The portion of precipitation that does not evaporate or naturally percolate into the ground, but flows via one or more of the following means:
- surface or overland flow,
- interflow,
- shallow ground water,
  into one or more of the following:
- stormwater drainage facilities,
- defined surface waterbodies (e.g., rivers, streams, creeks, sloughs, ponds, lakes),
- springs,
- seeps,
- wetlands

Shall- Mandatory action.

Should- Recommended action, but not mandatory or required.
EXHIBIT C - Planning Commission Recommended definitions for WCC 20.97

**Stormwater**: The portion of precipitation that does not evaporate or naturally percolate into the ground, but flows via one or more of the following means:
- surface or overland flow,
- interflow,
- pipes and other features of a stormwater drainage system,
  into one or more of the following:
- defined surface waterbodies (e.g., rivers, streams, creeks, sloughs, ponds, lakes),
- constructed infiltration facilities.

**Stormwater runoff**: The portion of precipitation that does not evaporate or naturally percolate into the ground, but flows via one or more of the following means:
- surface or overland flow,
- interflow,
- shallow ground water,
- pipes and other features of a stormwater drainage system,
  into one or more of the following:
- defined surface waterbodies (e.g., rivers, streams, creeks, sloughs, ponds, lakes),
- springs,
- seeps,
- wetlands.
Policy 2DD-2: Protect the character of the rural area through the County’s development regulations. In addition to the policies of this plan that provide measures governing rural development, the following County’s key development regulations are incorporated into this plan by reference to assure that the plan contains measures to protect rural character:

C. Measures to protect critical areas and surface and groundwater resources:

4. Protect surface and ground water resources through stormwater management standards established in the County’s Development Standards per WCC 20.80.630, WCC 20.51, and 12.08.035 and referenced in the following Zoning Code provisions, adopted herein by reference:

   a. 20.32.656 Drainage, Residential Rural District;
   b. 20.34.659 Drainage, Rural Residential-Island District;
   c. 20.36.656 Drainage, Rural District;
   d. 20.37.655 Drainage, Point Roberts Transitional District;
   e. 20.44.652 Drainage, Recreation and Open Space District;
   f. 20.59.704 Drainage, Rural General Commercial District;
   g. 20.60.655 Drainage, Neighborhood Commercial District;
   h. 20.61.704 Drainage, Small Town Commercial District;
   i. 20.63.654 Drainage, Tourist Commercial District;
   j. 20.64.655 Drainage, Resort Commercial District;
   k. 20.67.653 Drainage, General Manufacturing District;
   l. 20.69.655 Drainage, Rural Industrial and Manufacturing District.

8. Limit phosphorus entering Lake Whatcom through WCC 20.51 Lake Whatcom Watershed Overlay District and Lake Whatcom and Lake Samish due to the application of commercial fertilizers to residential lawns and public properties through WCC 16.32, adopted herein by reference.
