Subject: RE: Cherry Point - Definition of Crude Atmospheric Distillation Capacity
Date: Thursday, January 23, 2020 10:46:46 AM

Mark and Matt,

Pursuant to the Planning Commission's request, below is a definition for "Maximum Atmospheric Distillation Capacity" consistent with the discussion at the last Planning Commission Meeting.

- *The "Maximum Atmospheric Crude Distillation Capacity" or "MACDC" is the maximum number of barrels of input that the atmospheric distillation unit can process within a 24-hour period when running at maximum capacity. Maximum capacity is defined as the physical constraints of the atmospheric distillation process equipment as determined by a professional engineer licensed in the State of Washington and shall be measured in barrels per day. Such information shall be protected from disclosure by Whatcom County as Non-Disclosable Confidential Business Information.*

Please review and let me know if you have any questions or concerns. Thank you.

Kind Regards,

Jeff

Good morning Mark and Matt. I am running a bit behind this morning. I plan to send you the definition in the next hour. My apologies for the delay. Please advise if that timing will not work for you and I will make adjustments as able. I can be reached at 360-319-4599 if you would like to discuss this over the phone. Thank you for reaching out on this.

Kind Regards,

Jeff

Subject: Cherry Point - Definition of Crude Atmospheric Distillation Capacity

Hi Jeff:

Will you be able to provide a definition of "crude atmospheric distillation capacity" soon?

Thanks,

Matt
