Mi Mark,

I wanted to send over a revised version of the value added definition for use with the planning commission. We found a few corrections that needed to be made both technically and from a legal definition perspective. Please let me know if you have any questions about the revised definition.

Thanks!

“Value added processing” is the modification of material through:

1. *Processing to meet product specifications and/or local, regional, national, or international standards and regulations;*
 2. *Processing to meet shipment or pipeline specifications, standards and regulations;*
 3. *Alteration of physical or chemical properties or conditions;*
 4. *Removal of impurities;*
 5. *Blending;*
 6. *Refining;*
 7. *Vapor pressure control or adjustment; or*
 8. *Other similar modifications of material;*
- Provided, however, value added processing does not include export of unrefined crude oil which is not processed or consumed at Cherry Point.*

Subject: Cherry Point - Definition of Value Added Processing

Hello Mark,

Pursuant to the Planning Commission's request, below is the definition for "value added processing" consistent with the discussion at the last Planning Commission meeting. We will have representatives from P66 and BP available during the Planning Commission meeting to provide additional detail or answer questions.

"Value added processing" includes but is not limited to:

- 1. Processing to meet product specifications and/or local, regional, national, or international standards and regulations*
- 2. Processing to meet shipment or pipeline specifications, standards and regulations*
- 3. Removal of impurities*
- 4. Blending*
- 5. Refining*
- 6. Vapor pressure control or adjustment*
- 7. And other similar modifications of material*

Provided however; value added processing does not include export of unrefined crude oil which is not processed or consumed at Cherry Point.

Please let me know if you have any questions or concerns. Thank you.

Best,

Holli Johnson
