

Whatcom County 2022-23 Influenza Report

Weeks 46-47, November 13-26, 2022

Published by: WCHD Communicable Disease & Epidemiology Division

Summary

- During weeks 46-47 there were three hundred fifty-eight positive influenza A tests, and five positive influenza B tests, reported by Family Care Network, PeaceHealth St. Joseph Medical Center, PeaceHealth Medical Group Pediatric Clinic, Sea Mar, and Unity Care NW combined.
- There were thirty-one hospitalizations related to influenza-like illness during weeks 46-47.
- No lab-confirmed deaths related to influenza were reported during weeks 46-47.
- Of the number of people presenting at the emergency department during week 47, 12.87% had influenza-like illnesses.
- There were no new influenza outbreaks reported by long-term care facilities in Whatcom County.

There has been 1 lab-confirmed, influenza-related death reported in Whatcom County to date this flu season.

Whatcom County Hospitalizations Related to Influenza-like Illness (not lab-confirmed)

Syndromic Surveillance Data

The Whatcom County Health Department monitors emergency department visits at PeaceHealth St. Joseph Medical Center through the National Syndromic Surveillance Program. Of the number of people presenting at the emergency department during week 47, 12.87% had influenza-like illnesses. This is up from 7.6% of people with influenza-like illnesses during week 46.

Laboratory Data

The total number of influenza A and Influenza B tests and the percentage positive is an indicator of influenza activity in the community. Influenza is not a routinely reportable condition, but some clinics have agreed to submit data to assist in looking at current influenza activity locally. The data in the table is from Family Care Network’s Point of Care Testing, PeaceHealth Medical Group Pediatric Clinic’s Point of Care Testing, PeaceHealth St. Joseph Medical Center Lab, Sea Mar’s Point of Care Testing in Whatcom County, and Unity Care NW’s Point of Care Testing combined.

Family Care Network, PeaceHealth, Sea Mar, and Unity Care NW Data

| CDC Week | 42 | 43 | 44 | 45 | 46 | 47 |
|------------------|------------|------------|-----------|------------|------------|------------|
| End date | 10/22/2022 | 10/29/2022 | 11/5/2022 | 11/12/2022 | 11/19/2022 | 11/26/2022 |
| Influenza | | | | | | |
| Total tests | 252 | 348 | 329 | 390 | 583 | 714 |
| N(%) Positive A | 3(1.2%) | 6(1.7%) | 12(3.6%) | 28(7.2%) | 137(23.5%) | 221(31.0%) |
| N(%) Positive B | 5(2.0%) | 3(0.9%) | 1(0.3%) | 1(0.3%) | 4(0.7%) | 1(0.1%) |

*PeaceHealth St. Joseph data is for weeks ending on Sunday, whereas the rest of the above data is for weeks ending on Saturday.

Nursing Homes

Influenza reporting requirements include outbreaks of influenza-like-illness in institutional settings such as long term care facilities. Because some elderly people with influenza may not have a prominent fever, outbreaks are defined as either more acute febrile respiratory illnesses (>2 cases within 72 hours of each other) within the facility, or any resident testing positive for influenza. There were no new influenza outbreaks reported by long-term care facilities in Whatcom County during weeks 46-47. There has been one influenza outbreak to date this season.

University of Washington

According to the University of Washington’s most recent Virology Laboratory Respiratory Virus Detection report there were nine hundred twenty-nine positive influenza A tests, and one positive influenza B test, during CDC week 47.

Washington State News

According to the Washington State Department of Health's most recent influenza update, flu activity was very high in Washington during week 46. Nine influenza-like illness outbreaks in long term care facilities have been reported for the 2022-2023 season to date. During week 46, 7.5 percent of visits among Influenza-like Illness Network participants were for influenza-like illness, above the baseline of 1.8 percent. During week 46, 22.9 percent of specimens tested by WHO/NREVSS collaborating laboratories in Washington were positive for influenza. Influenza A and Influenza B were reported to the ILINet surveillance system during week 46. Seven lab-confirmed influenza deaths have been reported for the 2022-2023 season to date.

Pneumonia and Influenza Mortality Surveillance

The most current National Center for Health Statistics (NCHS) mortality surveillance data is included below for reference. Of the deaths that occurred during the week ending November 19, 2022 (week 46), 9.4% were due to pneumonia, influenza, and/or COVID-19. This percentage is above the epidemic threshold of 6.3% for week 46.
